

SETTING POPULATION AND HABITAT OBJECTIVES FOR GRASSLAND BIRDS:

Central Grasslands Avian Modeling Project
(CGAMP)

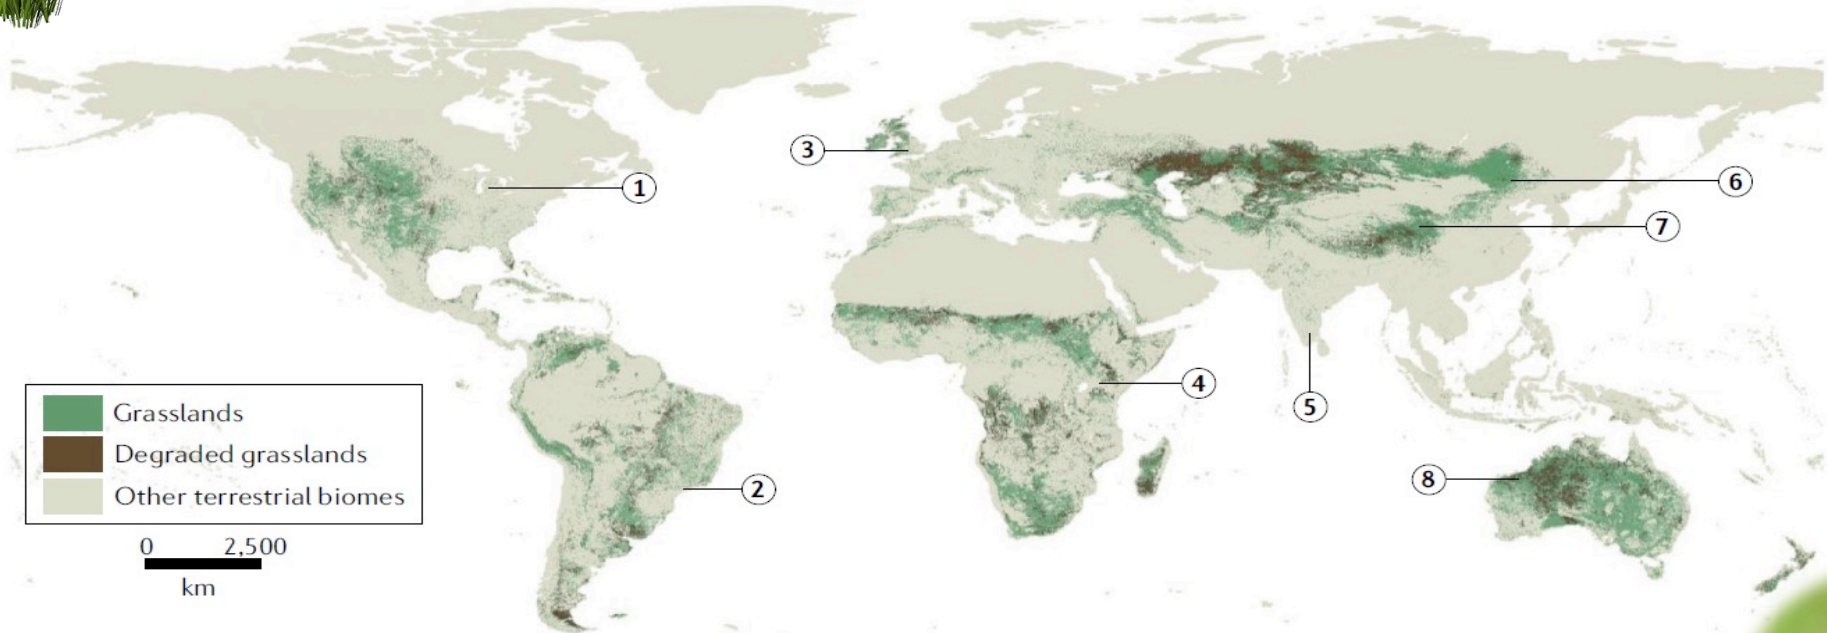

Chris Latimer, Research Director

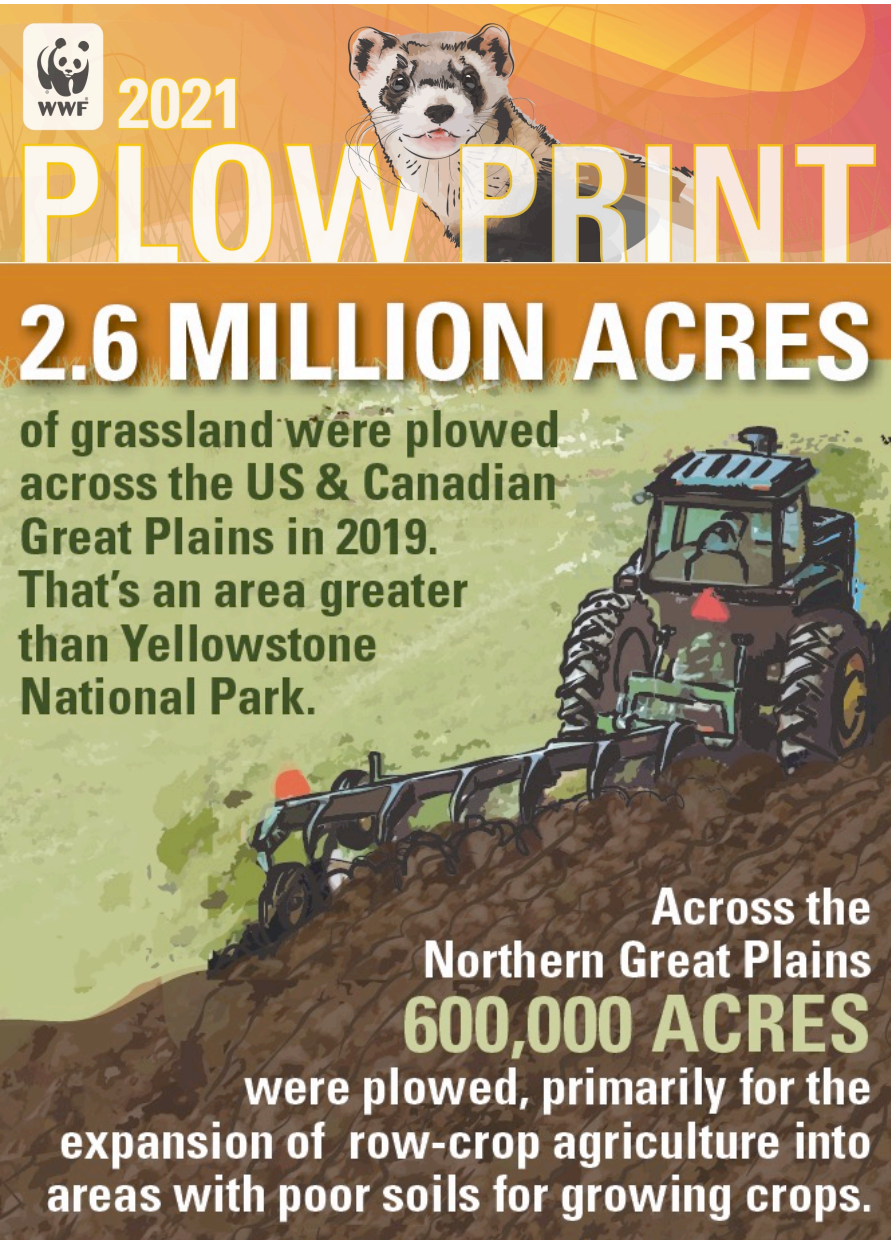

Why Grasslands?

Global grassland degradation

Agricultural Conversion to Cropland

WWF 2021

PLOWPRINT

2.6 MILLION ACRES

of grassland were plowed across the US & Canadian Great Plains in 2019. That's an area greater than Yellowstone National Park.

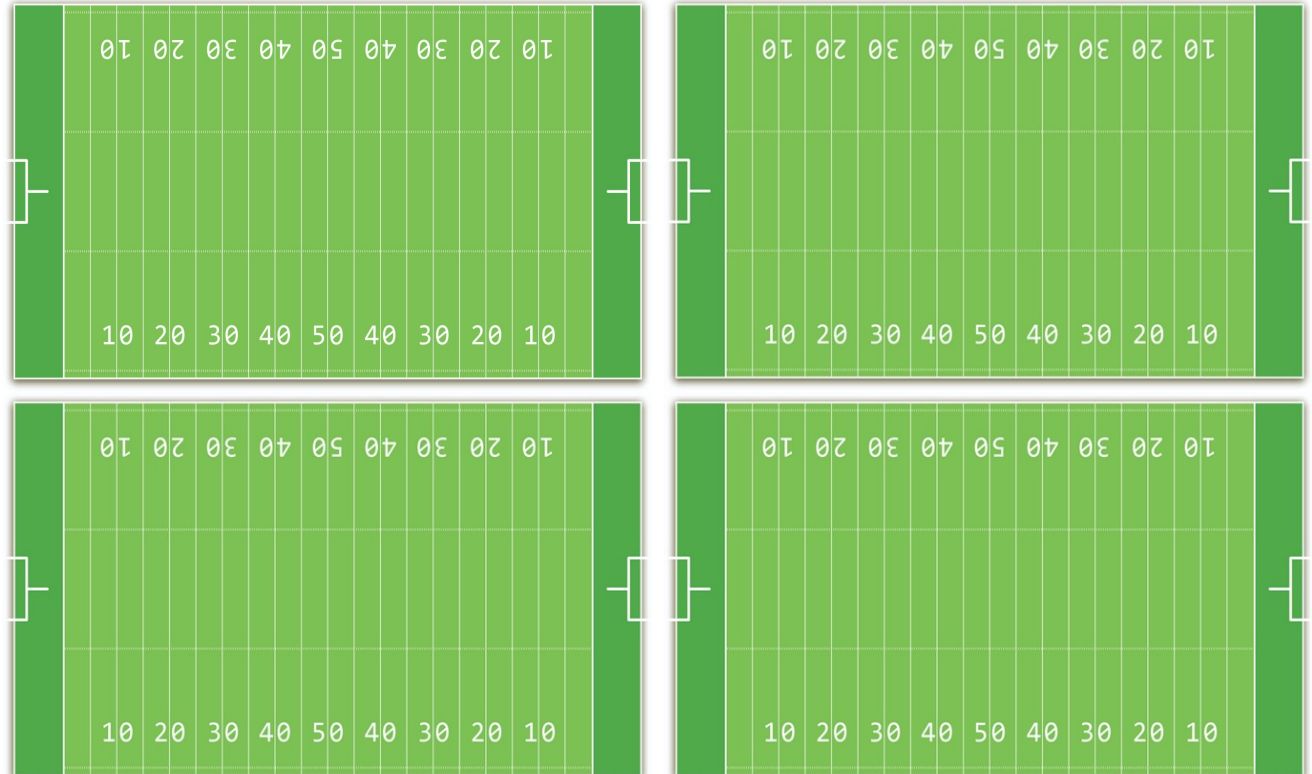

Across the Northern Great Plains **600,000 ACRES** were plowed, primarily for the expansion of row-crop agriculture into areas with poor soils for growing crops.

US & CAN:

- ~4 football fields of grassland are lost every minute to agricultural conversion

Mexico:

- Cropland expanding at 6%/yr
- >500,000 acres of grassland lost in northern Mexico since 2000

Shrub/Tree Encroachment

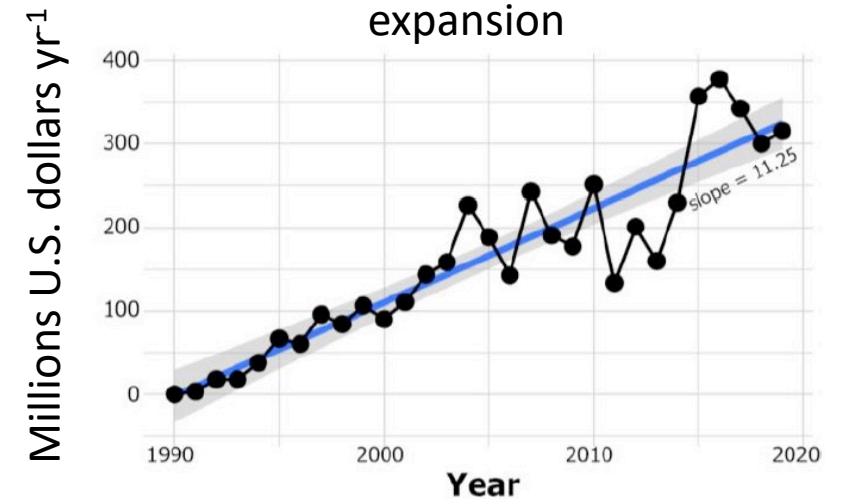

- Tree and Shrubs are a key threat to grasslands
- Species like ERC threatening intact grasslands
- Anticipated \$5 Billion in lost revenue with greater impacts likely in MX

Cumulative Tree Cover

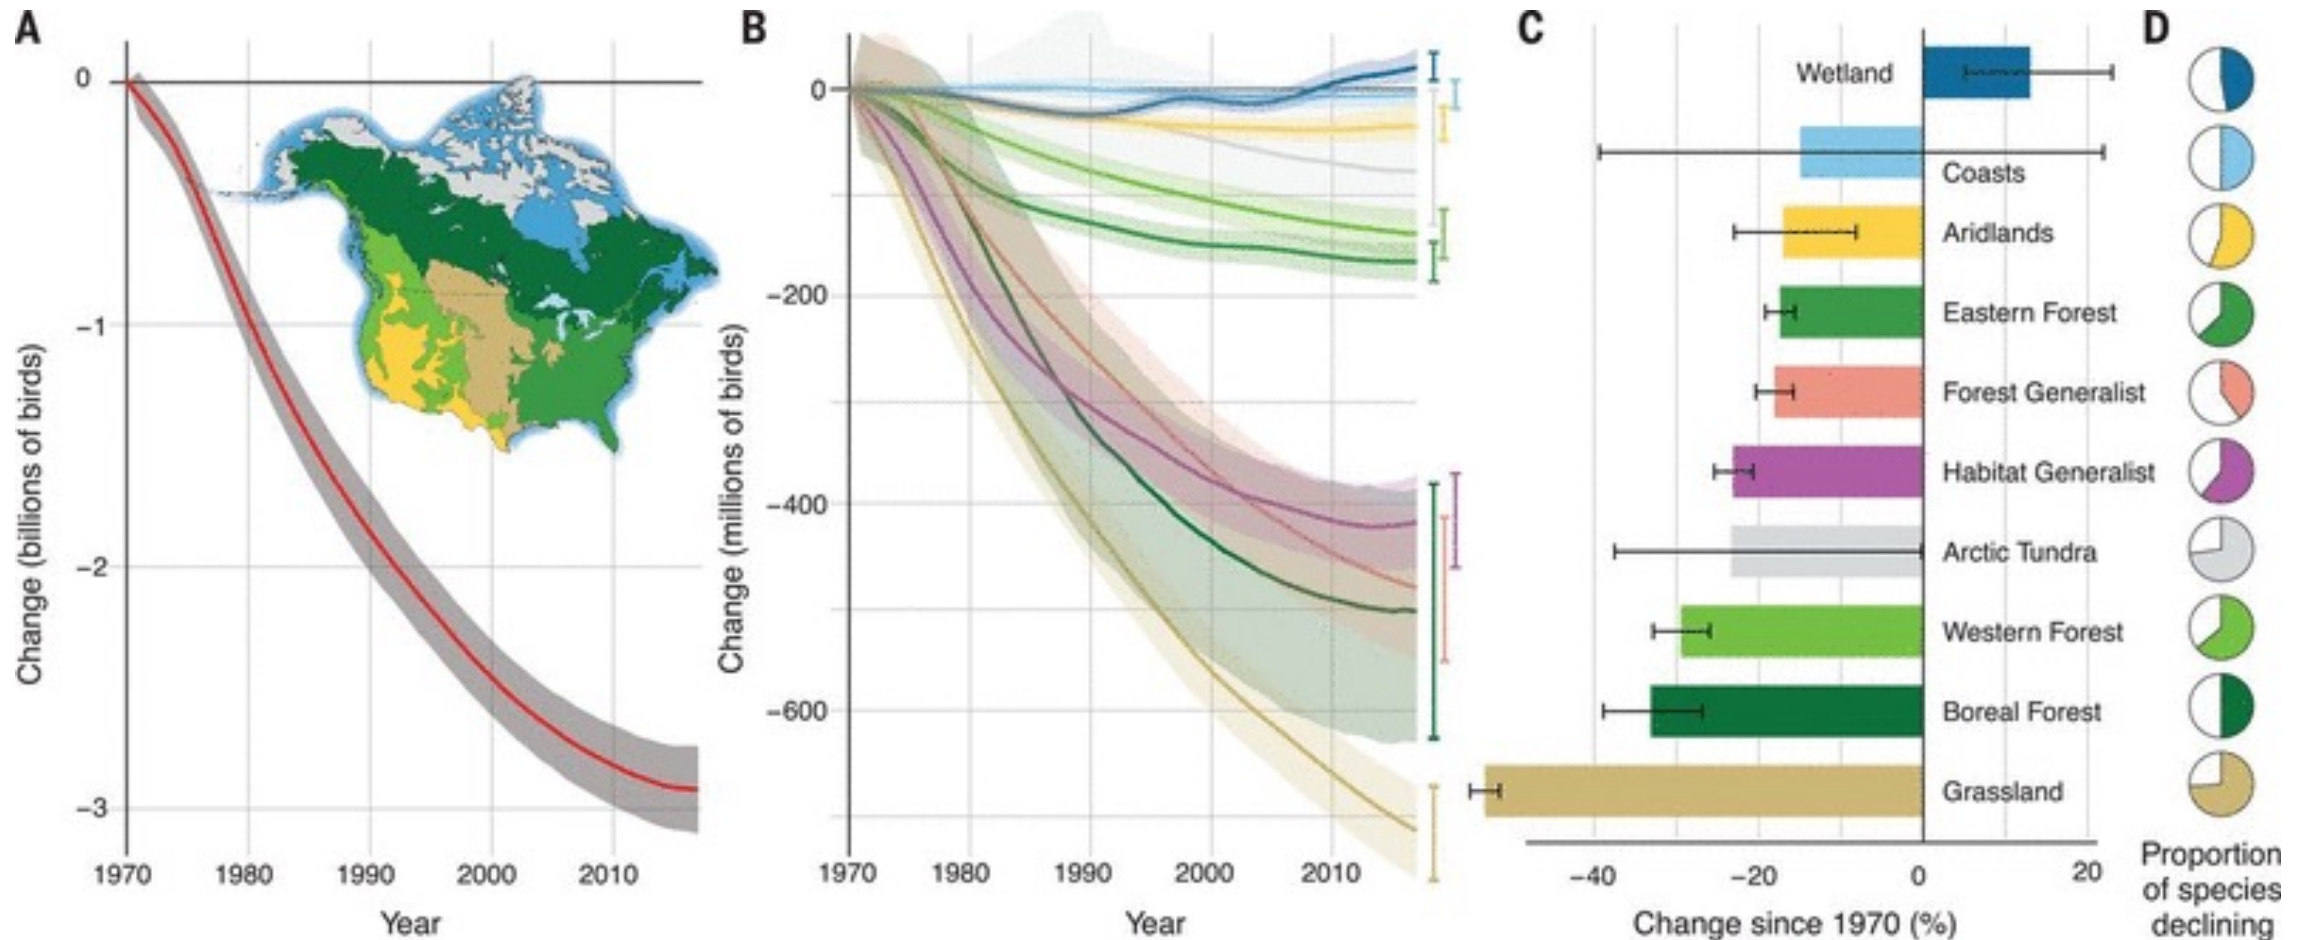

Lost revenue from tree cover expansion

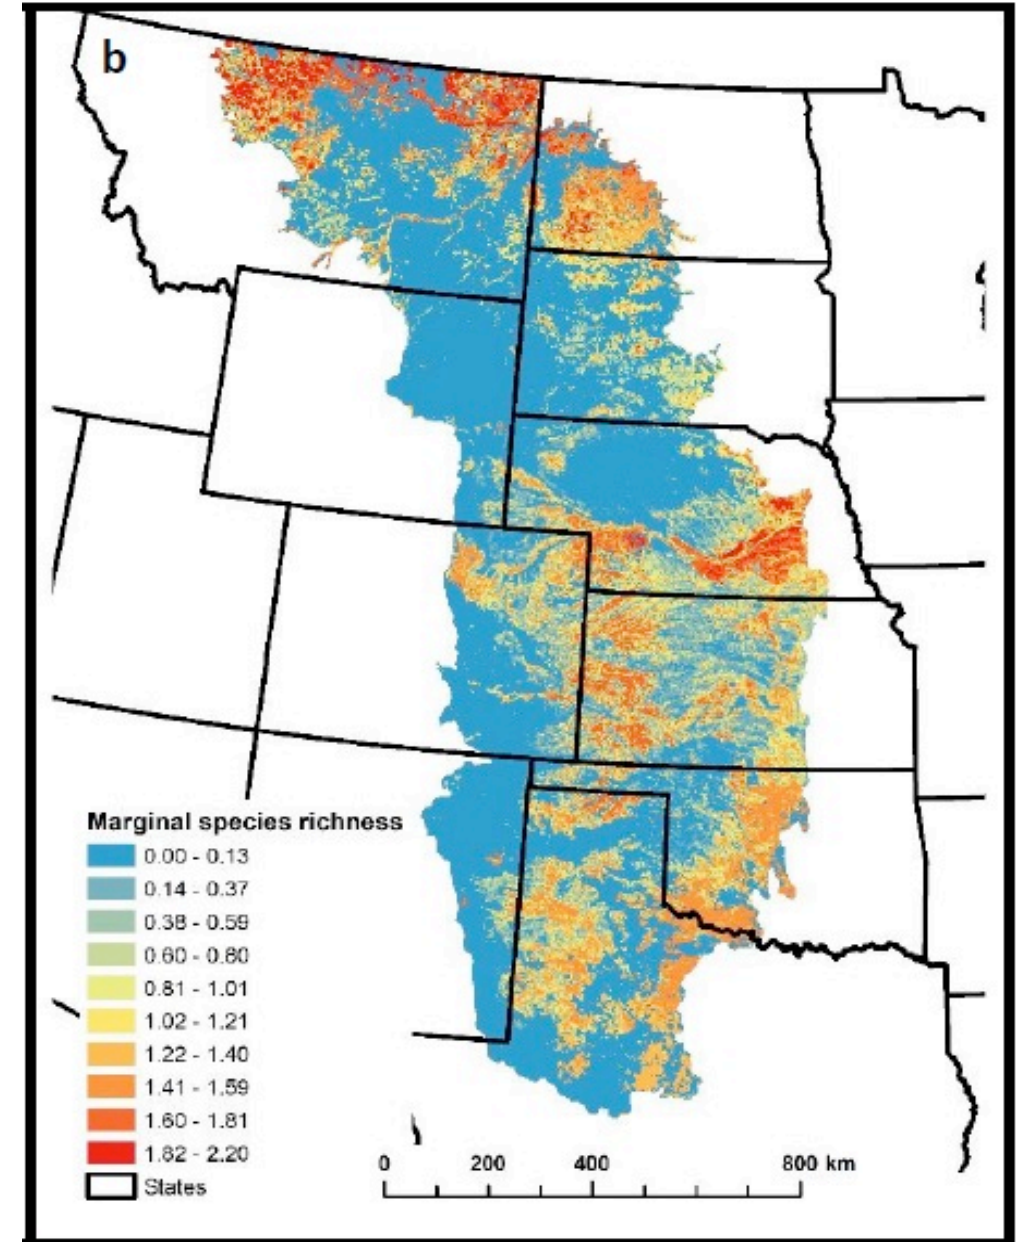

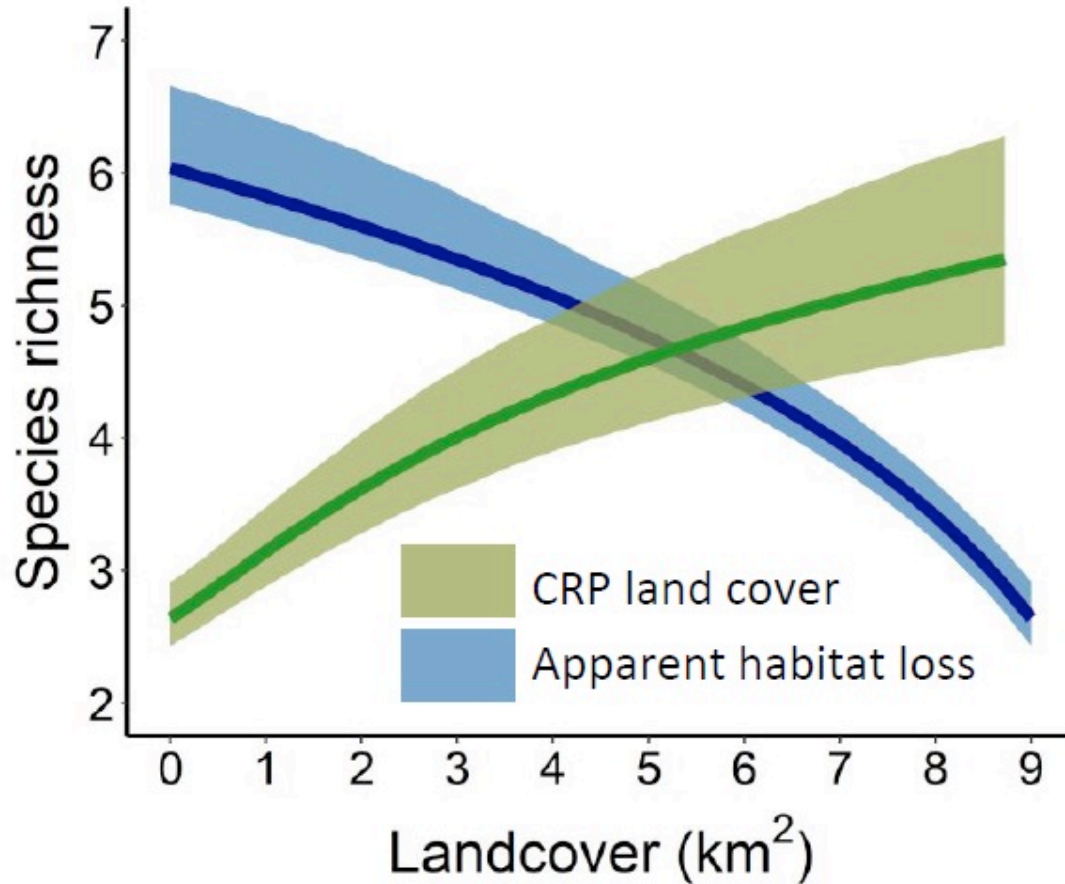

3 Billion Birds: Grasslands are Imperiled

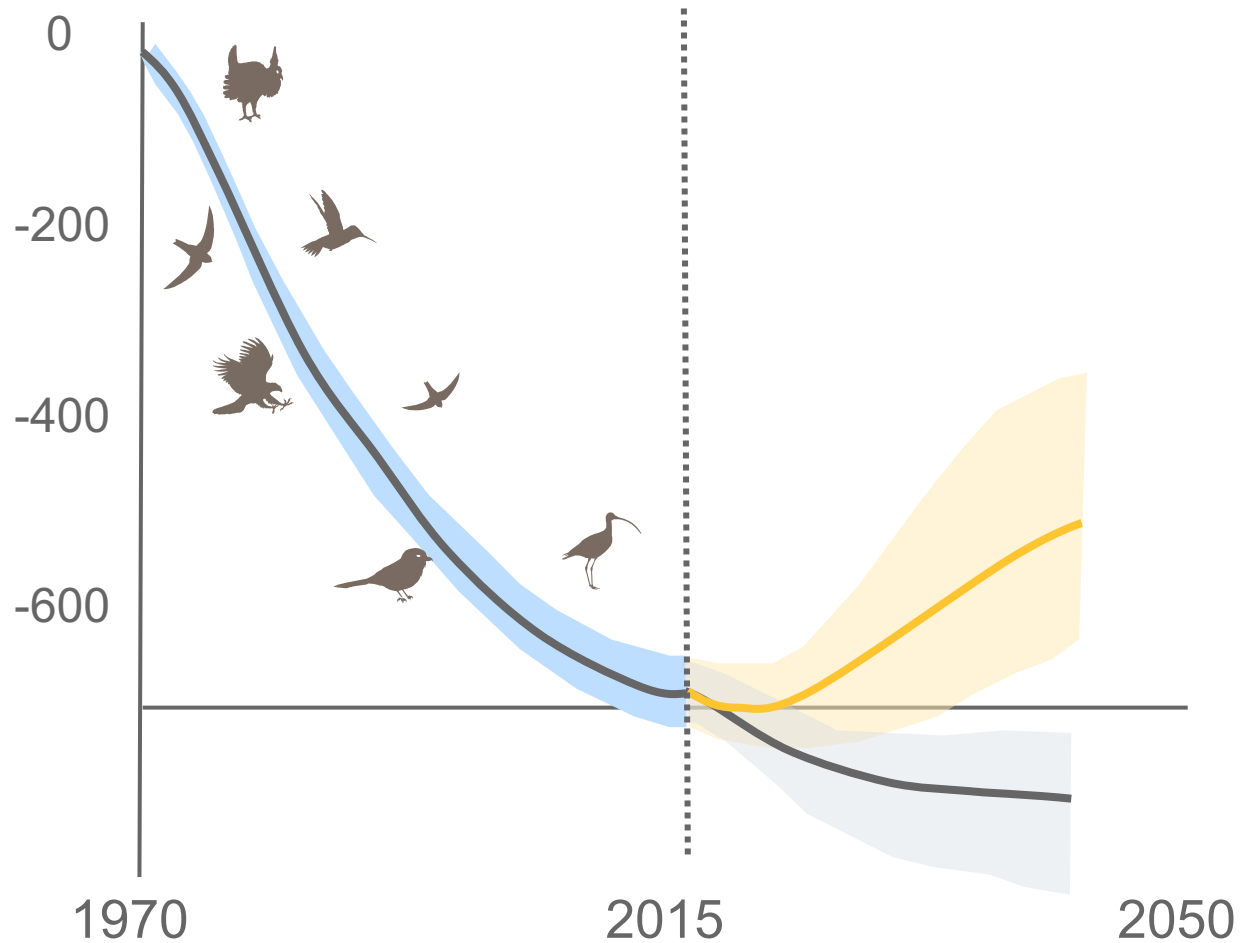

- 72 Million Grassland Birds lost (52%) with 75% of species declining
- Compromise key ecosystem services and functions, including pollination and pest-control

Hope for the Future: Landscape Scale Conservation

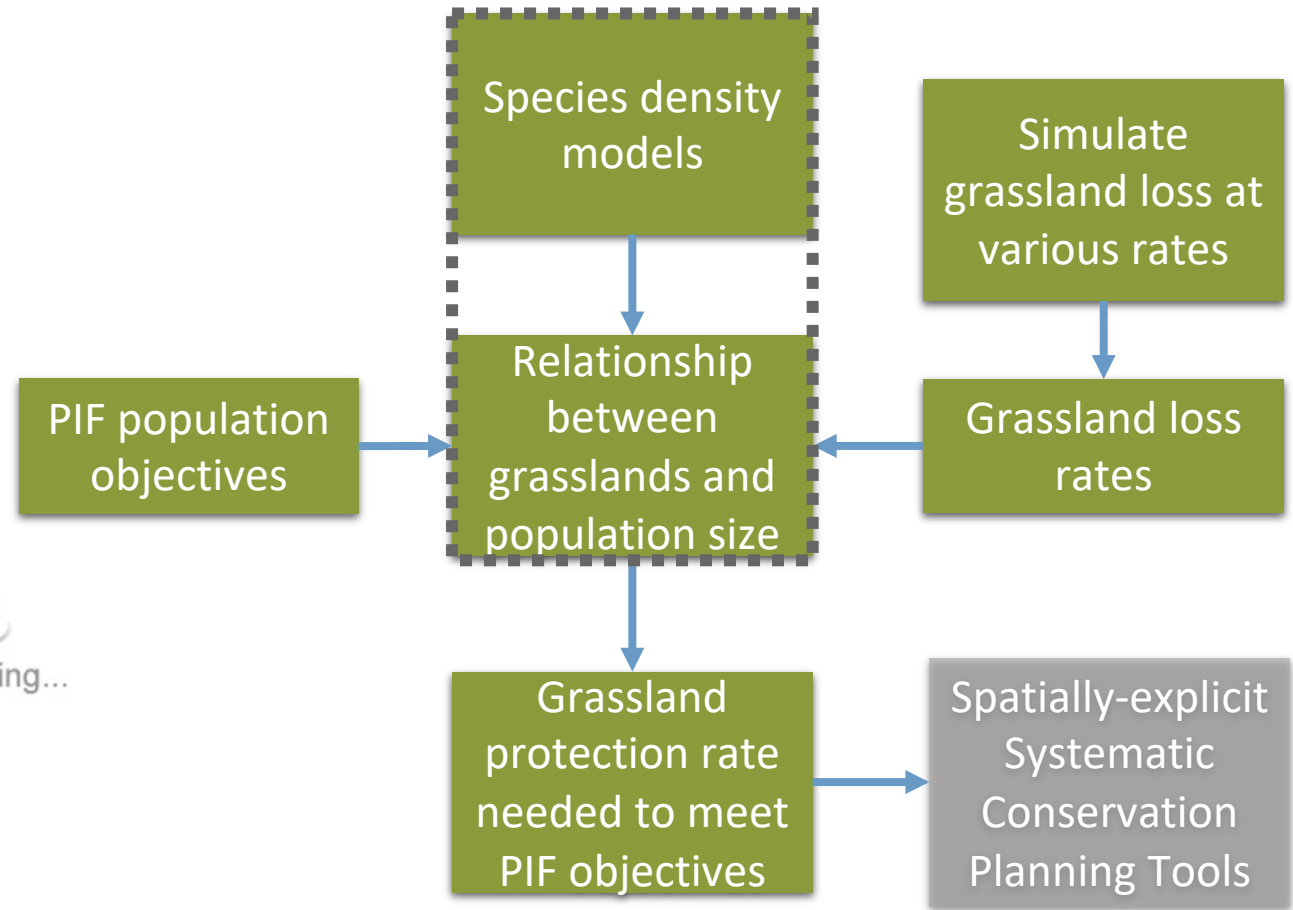

Bending the curve: what could the future look like?

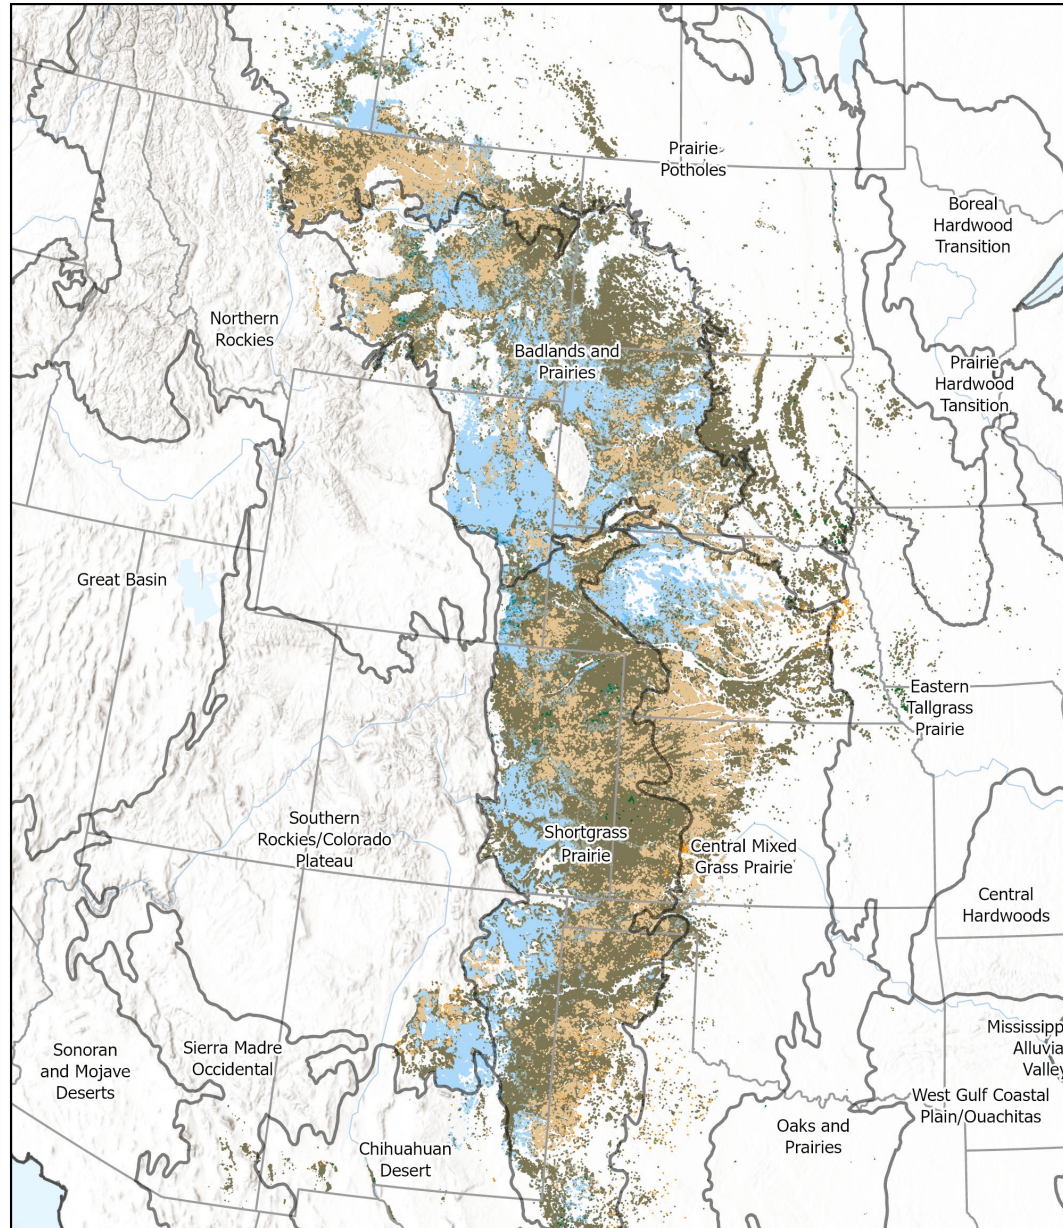

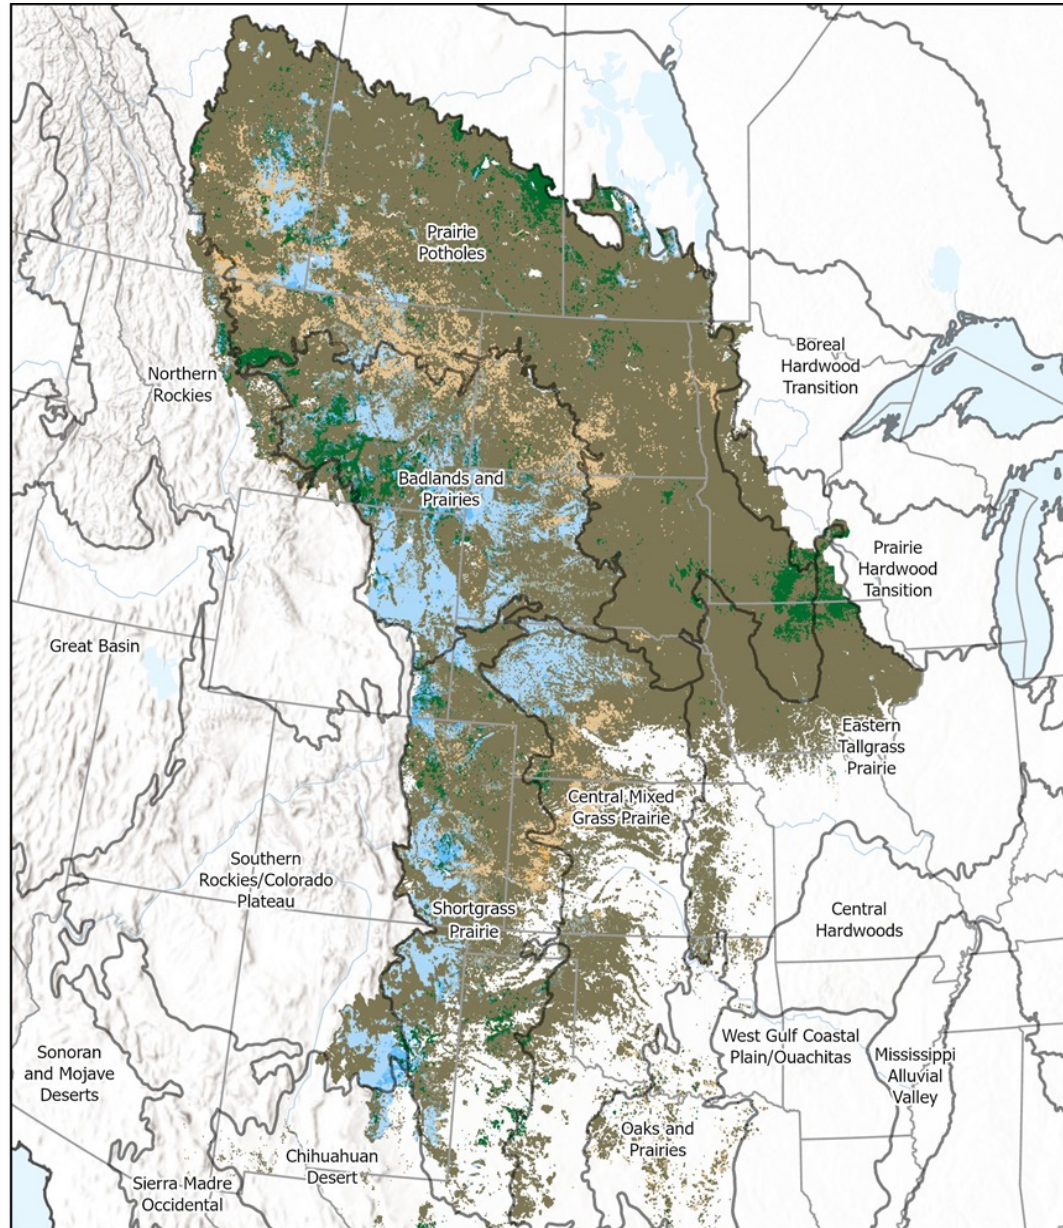

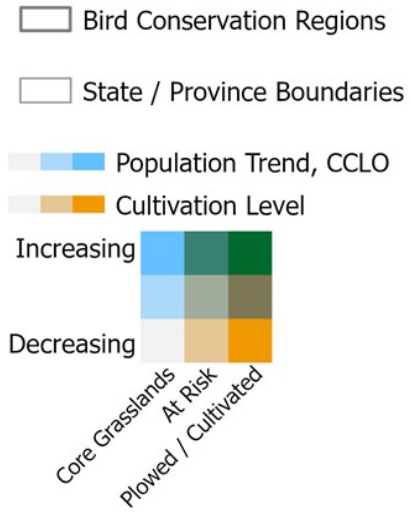

**“THAT DEPENDS
A GOOD DEAL ON
WHERE YOU
WANT TO GET TO”**

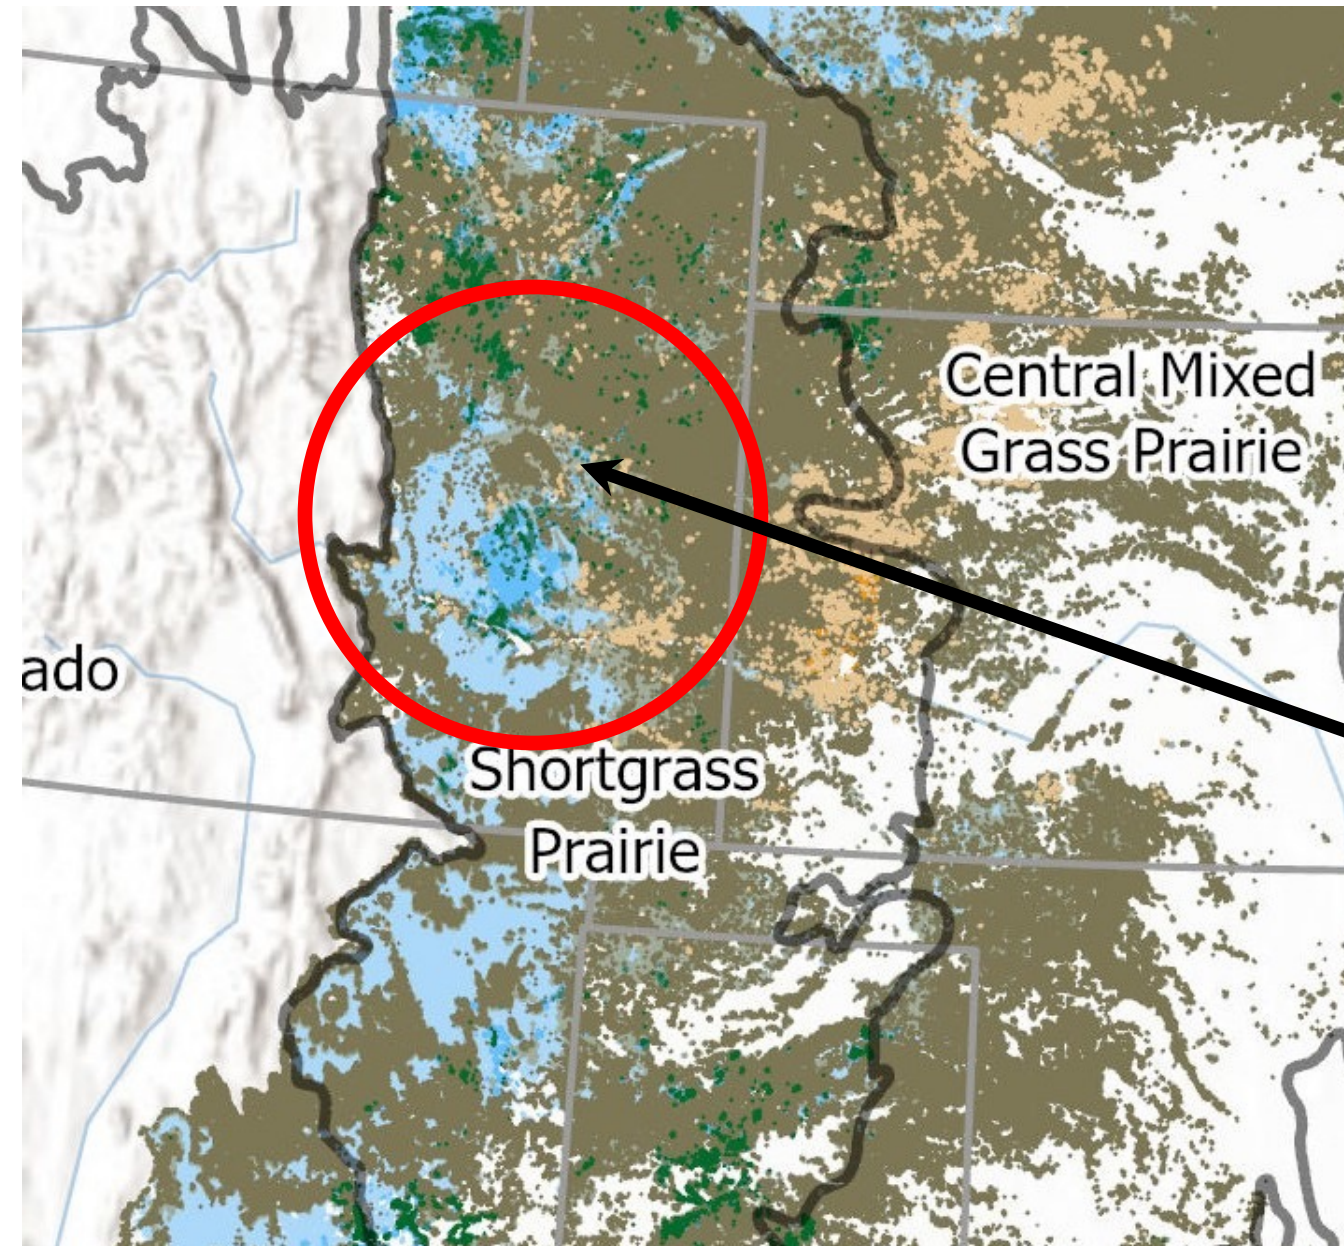

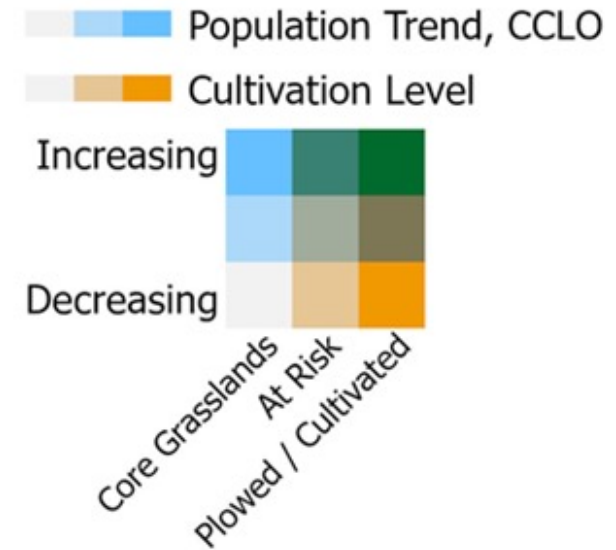

Setting Targets: Central Grasslands Avian Modeling Project (CGAMP)

1. Build technical committee ✓
2. Decide on analysis boundary ✓
3. Develop template polygon and raster
 - 800-m resolution ✓
 - NAD 83 conic equal area projection ✓
4. Decide on covariates ✓
5. Develop covariate spatial data ✓
6. Develop species density models for 250+ grassland bird species Loading...
7. Set grassland conservation and restoration acre objectives
8. Make acre objectives spatially explicit
 - Tentative date – Fall 2022

What If:

- Protect/Restore At Risk Grasslands
- Lose At Risk/Core Grasslands

Why?

- Underlying cause/mechanisms

Integrated approach at Scale: Grassland Roadmap Summit

1. Leverage Science to Inform Conservation
2. Strengthen Collaboration
3. Refine Funding and Policy Initiatives
4. Adaptive co-production approaches
